The Sonatus SDC Solution easily enables ongoing tuning of electronic automotive components

In a press release announcement on Dec. 7, Sonatus has unveiled the Sonatus Software-Defined Component (SDC) Solution consisting of in-vehicle and cloud software. The Sonatus SDC Solution helps automakers turn any electronic component in a vehicle into a software-defined component.

Through targeted data collection and dynamic automation, the Sonatus SDC Solution allows original equipment manufacturers and suppliers to monitor, test and optimize components without complex over-the-air (OTA) updates, at any point in the vehicle life cycle. The Sonatus SDC Solution is available for production usage in first quarter 2024 and builds on the deployment of the Sonatus Vehicle Platform in over 1 million vehicles to date.

“Sonatus is at the forefront of accelerating vehicle software innovation, and with our SDC Solution, we are providing a holistic offering that lets automotive manufacturers and suppliers achieve the full promise of SDVs,” said Jeff Chou, CEO and co-founder, Sonatus. “Introducing optimization capabilities into the vehicle through software-defined components will help automakers get more software-defined cars on the roads with the consumer promise of a ‘smart’ vehicle that dynamically adjusts to different conditions.”
