The system will be localized at Magna's Wuhu facility in China for battery-electric vehicle applications and integration across global platforms

Magna has secured a Chery program to build a 250-kW 800-V two-speed electric drive system at its new Wuhu facility in mainland China, the company said July 28.

The award marks a step in Magna's electrification work in mainland China and will be localized for production at the Wuhu plant. Magna said the system is intended for battery-electric vehicle applications and can be integrated across global platforms.

The electric drive is based on Magna's modular electrification portfolio and uses a compact, integrated design. The company said the architecture is designed to improve power density, energy efficiency and driving performance.

"Magna's strength lies in our ability to support customers across propulsion technologies and regions," said Diba Ilunga, president Magna Powertrain. "This new 800V eDrive award with Chery reflects how we support OEMs as they move forward, whether through electric, hybrid or mixed technology strategies, while delivering the performance, efficiency and scalability today's markets demand."

Magna also said its DHD Duo dedicated hybrid drive system with Chery has entered series production on the Jetour G700. That program was first announced in 2024.

The company said the two programs show its ability to develop electrified propulsion products while using local manufacturing in mainland China.
